

Due to our growing presence in the Industrial Services & Environmental Remediation fields, Stewart' Grading & Hauling is pleased to announce that we have established a new company, Stewart's Environmental Services, Inc to manage this growth. And to that end we are likewise pleased to announce that we have grown our transportation fleet with the addition of a new Roll-Off Truck and new roll-off containers.

Our turn-key service includes delivering quality roll-off containers where and when you need them, ON-TIME, then managing the entire disposal process from characterization, pricing, profiling and manifesting.

Roll-off containers are the ideal way to manage the disposal of hazardous and non-hazardous debris and waste at your work site.

From construction debris, investigation derived waste, soil and tree cuttings to non-friable asbestos, roll-Once delivered to the job site, Stewart's Environmental can manage the clean-up process and related services or the container can be left on location for your team's use during the duration of your project.

Our roll-off containers are available in a variety of sizes and are maintained to the highest industry standards.

For drilling projects, the containers are used to store the drilling mud prior to lab analysis of the soil. Once the analysis is complete and the proper disposal location is determined, our team will assist you with determining the most cost efficient, and appropriate designated landfill.

Our long-standing relationships with the local landfills and disposal facilities enable us to facilitate the waste profile process as well as the actual disposal of the waste.

Our Roll-Off Services include:

- 20-Yard Roll-Off Containers With gasketed rear doors, bows and tarps
- 30-Yard Open Top Debris Boxes
- Vacuum Boxes
- Custom Fit Liners
